1. General Remarks

Due to high and mountainous terrain close to the airport and along the departure flight path and the required unusual high climb gradient it is absolutely necessary that pilots observe the minimum climb gradient prescribed for each departure procedure.

For departure procedure LOC/DME OEJ (109,70 MHZ) shall be used.

2. Meteorological Minima (day and night).

a) For departing aircraft Ground visibility 1.500 M

Ceiling 1.300 FT

b) during VISUAL operations Flight visibility: at least 3 KM for aircraft Cat A and B

at least 5 KM for aircraft Cat C and D

c) special performance departure: RVR 150 M, Take-off alternate required!

Note: Due to erroneous LOC indications when off centerline from 2,0 DME before until 2,0 DME after LOC station, use QDR

locator RUM as additional quidance.

Note: If unable to cross OEJ at 4.800 FT MSL and D-7,0 OEJ at 6.700 FT MSL, a higher ceiling and visibility is necessary.

In this case climb visually via locator RUM 4.700 FT MSL.

Contingency procedures are under the responsibility of the operator.

Calculation of the SID's is based on an all - engines operative minimum net climb gradient of 3.3% (205 FT/NM). Where a greater climb gradient for a specific SID (or part of SID) is necessary this is indicated in the description of the route.
